How to design an FLL TShirt!

Guidelines and Limitations

Your design has to fit on a standard size piece of paper...
this is 8 1/2" in width and 11" tall.

Guidelines: To keep the design affordable and easy to deal with...

- Produce the work on a computer
- Work with a resolution of 300 dpi
- Make the design crisp and clean...
 - No Smudges!
 - Solid fills

Think about icons and company logos as examples of good design

Reducing the number of actual colors reduces the cost.

Save the final product as a jpeg image with highest quality (typically 12)

Limitations:

The base t-shirt is white

All colors print nicely on a white background

Many designs incorporate white and this way it is a free "color"

The BadgerBOTS and major sponsors logos will be printed on the back.

The design can not exceed the size of a standard sheet of letter size paper.

If hand drawn, it MUST be on high quality, unlined, white paper... clean!

There is NO limit on the number of colors you use... but you pay for each one!
